Business Continuity and Disaster Recovery Summary

Document KR-BCP-004 | Version 1.2 | Effective 2025-11-10 | Owner: Security

1. Recovery Objectives

Kestrel Insight targets a Recovery Point Objective (RPO) of 4 hours and a Recovery Time Objective (RTO) of 12 hours in the event of a full regional outage.

2. Resilience Architecture

- Services run across three availability zones within the customer's hosting region.
- Production databases are replicated synchronously across availability zones, so the loss of a single availability zone does not cause data loss.
- Encrypted backup copies are stored in a separate AWS account to protect against account compromise.

3. Backup Retention

Encrypted database backups are retained for 90 days. Document storage uses object versioning, and deleted objects remain recoverable for 30 days.

FICTIONAL SAMPLE DOCUMENT - Kestrel Ridge Software is not a real company.

4. Testing

The disaster recovery plan is tested at least annually through a failover exercise. The most recent exercise, completed in October 2025, met the stated recovery objectives.

5. Business Continuity

Kestrel operates as a remote-first company with no single critical office location. Critical roles have designated backups, and the business continuity plan is reviewed annually by the executive team.

6. Customer Communication

During a service disruption, Kestrel posts status updates at status.kestrel-insight.example. Customers can subscribe to notifications by email or webhook.
